Glass Railings

CRL's Premium Cap Rails are manufactured using a unique process known as Bump-Forming that ensures accuracy, consistency, and high quality. Unlike roll-formed cap rails, CRL's Bump-Formed Premium Cap Rails do not contain the stress and spring back associated with the roll-formed product. Welds on both sides of the channel add strength and stability to the Cap Rail. This results in a Cap Rail with tighter tolerances, consistent radius, and the ability to fit into welded corners without twist or discoloration. Put simply, it means this is the best product in the marketplace.

FEATURES & BENEFITS:

- Bump-Formed and Welded 120" (3.05 m) and 168" (4.27 m) Stock Lengths are Available in 2" (50.8 mm).
- Connects to a Variety of Fabricated Corners and End Caps
- Cut to Size or Custom Fabricated Lengths Also Available
- Stainless Alloy 304

Wardrobe Doors

Smooth and sophisticated, the Magic Touch Wardrobe System is not only effortless to use, it is defined by gentle curves that will complement any room of your home. It's versatility allows you to choose from any panel infill to customise your wardrobe to suite your decor. Choose from safety mirrors for a spacious feel or infill panels for an individualised style. This system is available in two, three or four panel configurations on a double track sill to suit any requirement.

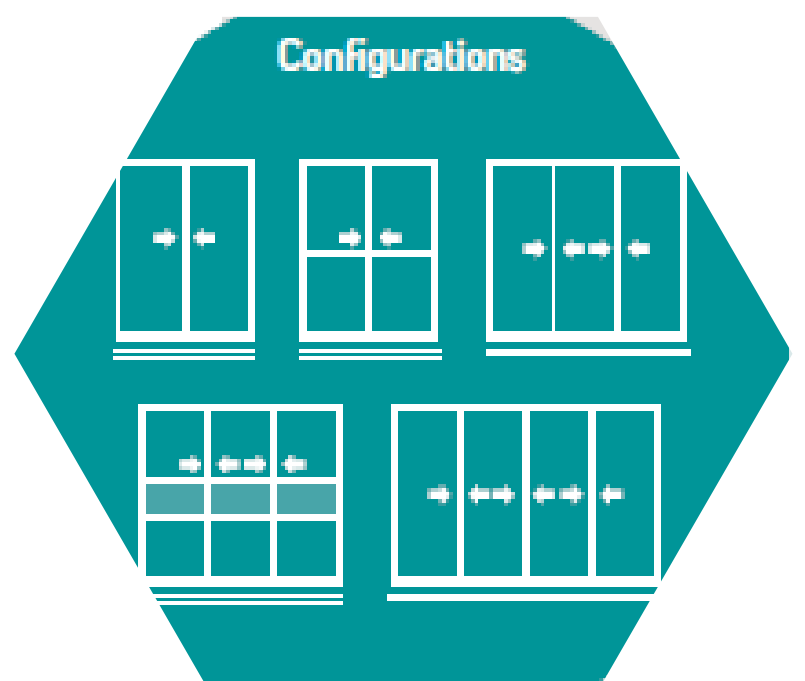

FEATURES & BENEFITS:

- Standard double head and sill tracks to suit 78mm opening
- Two, three and four panel door configurations available with options of using jambs, no jambs or jamb with return provision
- Magic Touch Softclose system provides an anti-slam feature with an elegant, yet quiet feel, for superior functionality
- Specially designed midrail offers a contemporary design, allowing you to incorporate different panel types into the one door
- Concealed acetal resin rollers, easily adjustable at installation
- Nylon top guides for non-rattle movement, which also locks securely in place and cannot be forced out
- Colour coordinated bumper strips that fit into the grip style and acts as a cushion on closing
- Panel stile extrusion incorporates a 'finger pull' detail to assist in panel operation (opening and closing)
- Door system accommodates glass, mirror, MDF, vinyl coated plasterboard and laminated panels
- Purpose designed extrusions and components for specific performance, function and aesthetics of the system
- Doors can be installed wall to wall or corner return

FINISHES AVAILABLE:

- Powdercoated range
- Bright natural polished

PANEL OPTIONS:

Aluminum Louver Doors

Though louver design has changed a great deal since their early days, one thing has remained constant... louvres are the only window system that gives you the 100% opening advantage. This means louvres are the most practical window system on the market when it comes to taking advantage of breezes and natural ventilation.

The practicality of louvres mean that they can be used anywhere or better yet, everywhere. Use louvres to open up a room or the entire house to fresh air and cool breezes. Cooling and ventilating your home with fresh, natural breezes is not only healthy, but also energy efficient. So you save money whilst doing your bit for the environment.

FEATURES & BENEFITS:

- For strength and durability, we chose the proven 6063 T5 architectural aluminum alloy. Our components are extruded and machined to the tightest tolerances and industry standards for perfect fitment and function.
- For durability in our louver handles, trims and caps, we chose DuPont's UV stabilised Delrin 100P. It is virtually indestructible, UV resilient and can stand up to use and the elements for years.
- For long-lasting flexibility and UV resilience, our Rubber Contact Block is made of ExxonMobil's Vistalon EPDM rubber that will remain flexible and guarantee tighter sealing between our blades for years.
- For coating our aluminum, we chose the PPG range of powder coats. Resilient and wear resistant, these coatings can withstand years of exposure and the day-to-day operation of the louvres.
- For superior weather performance in our patented louver clip, we chose ExxonMobil's UV stabilised high-impact Polypropylene Resin that will not break, stay flexible and look good for years.
- For precision and corrosion resistant fasteners that guarantee flawless operation, we chose BTI's range of 316 Marine Grade Stainless Steel and High Tensile Aluminum screws and rivets.

Aluminum Louver Windows

Houses heat up. Sun on the roof and before long you've got a hot box. A hot box that's often much hotter inside than the air outside. To counter this you could install air conditioning or alternatively you can keep your home comfortably cool, almost every day of the year, simply by opening it up. Louver Windows allow you to do this with stylish design and elegant simplicity. More than any other window option they allow you to fully embrace the cool change. To invite in the refreshing breezes during or after a rain shower.

Essentially, Louver Windows help you to create a living space that works with nature rather than against it. A light and airy place where, through louvers wide open, you can hear the lovely morning birds and smell the flowers. This is what we mean by free air. And you can have it in every room of your home.

FEATURES & BENEFITS:

MAXIMUM PERFORMANCE

- Louvers windows are hurricane rated for wind and water to ensure maximum performance. They also feature tight sealing due to the patented 'living hinge' and drainage channel design, energy rated to meet building codes, as well as improved security available with easily fitted security screens. Louver windows are also manufactured exclusively from noncorrosive materials.

LIGHT. AIR. SPACE.

- Louver Windows are the perfect option to allow natural light, fresh air and a greater sense of space into any environment, especially when entertaining in the kitchen. Open up and enjoy the breeze!

MAXIMUM VENTILATION

- Louver blades fully open. This means they provide very little resistance to the air entering through the window opening. In effect, you get twice as much ventilation as you would through a same sized sliding window.

ENERGY EFFICIENT

- When fully open, the Louver Window allows 90% natural ventilation through the entire window opening which helps keep the building at a comfortable temperature at any time of day without the need for artificial cooling systems. This is in comparison to common powered awning windows that only provide between 12-30% air depending on the wind direction.
